

Gfi vision of mobile

Jean-Francois Gaudy

Mobility
and Citizen

Mobility
... when you believe that
everything is possible

Mobility, enterprise
and innovation

Mobility and
field operation

Mobility, enterprise and innovation

Mobility and Innovation have a tight integration

We have a clear vision based upon

1. Our **agile and market oriented** innovation process
2. Our capability to think and design **concrete, innovative and pragmatic solutions** that meet current needs of citizens and enterprises

Company Hub was directly born from this innovation concrete process

- › It was design to be the mobile portal of any enterprise, bringing all the relevant information to the worker, taking advantage of the mobile context (geolocalization, sensors, cameras, etc.)

All the paradigms of Mobility are available in one product

- › Addressing the **market fragmentation**
- › **Security**, a full secure solution
- › **Offline mode**, Company Hub is a full offline mode efficient solution
- › **Contextual information**, Company Hub brings context to enable relevant information in any situation

Mobility and Citizen

Bring the Mobility agility to the Smart City

- › City Hub is based upon the Company Hub engine
- › It addresses all the publics from the City Hall:
 - Elected
 - City Hall workers
 - Citizens
 - Local companies workers
 - Tourists
 - etc.

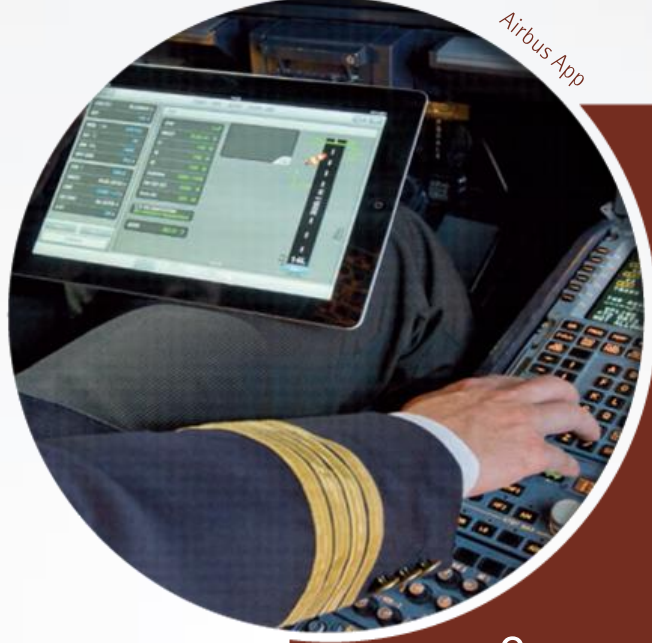

On the field we bring the
forms process to the operator
and **manage the**
synchronization with the all
the information systems

Mobility and
field operation

Mobility

... when you believe
that everything is possible!

Can you imagine a pilot using an IPAD to fly an Airbus?

- › All the avionics calculation on a tab
- › A real high level migration from fortran to objective C !

Thank you!
